Vương Xuân Khải

Software Engineer Intern (Telecommunications)

0336495104 xuankhai19102004@gmail.com Đông Anh, Hà Nội, Việt Nam

CAREER OBJECTIVE

A final-year Electronics and Telecommunications student seeking a Software Engineer Internship at Viettel High Tech to contribute to the research and development of core telecommunication systems. Equipped with a foundation in C/C++, Data Structures and Algorithms, and system architecture. Eager to apply problem-solving skills in a professional R&D environment and committed to building a long-term career in Vietnam's telecommunications and high-tech industry.

EDUCATION

Hanoi University of Science and Technology 2022 - 2026

Electronics and Telecommunications / Computer Engineering: CPA: 3.18

- **Award:** Merit Scholarship – Excellent Level (Top-performing students based on GPA), 2025
- **Relevant Coursework:** C/C++ Programming, Data Structures and Algorithms, Computer Networks, Telecommunication Fundamentals.

TECHNICAL SKILLS & KNOWLEDGE

Programming Languages	C/C++, C#, JavaScript/TypeScript.
Core Knowledge	Data Structures & Algorithms, Object-Oriented Programming (OOP), Design Patterns, Network Basics.
Tools & Frameworks	Git/GitHub, React.js, Next.js, Node.js, Unity.
Languages	English (TOEIC 720), Japanese (JLPT N5)

PROJECTS

2D RPG Platformer | Unity, C# 2/2025 - 7/2025

Github: https://github.com/xuankhai1910/RPG-2D-Platformer

- Developed an interactive application applying strict Object-Oriented Programming (OOP) principles and state management techniques.
- Implemented component-based architecture and integrated common software Design Patterns (Singleton, Observer, Factory), demonstrating transferable skills to robust core system development.
- Tech: C#, Unity, State Machines, OOP Design Patterns

Smart Parking Lot Management System | Academic Project 3/2024 - 5/2024

Data Structures and Algorithms

- Developed a console-based parking management application focusing on core algorithmic efficiency and memory management.
- Applied fundamental data structures and optimal search/sorting algorithms to manage vehicle entry/exit flows, calculate dynamic fees, and monitor available slots.
- Built a solid foundation in low-level programming concepts and logical problem-solving.
- Tech: C++, Standard Template Library (STL).
